

Grantee: Alaska Energy Authority
Project Name: Pre-design Bulk Fuel Facility Assessments

Grant and Project: DC-01493-01/340149

Grant Completion Report

Background:

Due to reduced public funds for bulk fuel upgrades, the Denali Commission and the Alaska Energy Authority have collaborated to create a revised approach which emphasizes repair of old tank farm facilities, where feasible, rather than replacement. The scope of this work includes site visits by design consultants to evaluate the bulk fuel facilities included in the summer 2015 inventory of bulk fuel tank farms. Reports were written on each eligible facility in these communities.

Activities:

AEA procured consulting services to perform the pre-design assessments in June of 2017. Assessments were performed June-August in Birch Creek, Ekwok, Goodnews Bay, Marshall, Minto, Scammon Bay, Shageluk, and Shungnak. The final assessment reports were completed and submitted to the Denali Commission in August per the grant schedule.

Project Budget:

1 Source Found					
	Award	Amount	Expended	Remaining	% Exp.
 1493		\$340,000.00	\$164,817.12	\$175,182.88	48%
Total Denali Commission Funding:		\$340,000.00	\$164,817.12	\$175,182.88	48%
Total Project Funding:		\$340,000.00	\$164,817.12	\$175,182.88	48%

Project Expenditures:

1 Reported Expenditure Found					
Period Ending	DC To Date	Other To Date	Total To Date	Total Funding	Expended
Closeout	\$164,817.12	\$0.00	\$164,817.12	\$340,000.00	48%

Project Outcomes:

The pre-design facility assessment reports were completed and submitted per the grant requirements.

Problems Encountered:

The consultant encountered some weather delays.

Conclusions and Recommendations: This effort was completed as intended and contributes to the development of a new approach to bulk fuel facility repairs.

Note that the photos required by the Denali Commission were submitted with the reports for each community.
